***Election/Restrictions***

**DETAILED ACTION**

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a surface acoustic wave device with an absolute value of a vector angle of a reflection obtained from a resultant vector generated by synthesizing reflection vectors at edges of first and second strips, classified in class 310, subclass 313D.
- II. Claims 6-10, drawn to a surface acoustic wave device with an absolute value of a phase difference between an excitation center and a reflection center of an asymmetrical double electrode, classified in class 310, subclass 313D.
- III. Claims 11-15, drawn to a surface acoustic wave device which has a structure determined by placement of strips such that a resultant vector length of normalized reflected waves is  $|\Gamma|$ , classified in class 310, subclass 313R.

Inventions of all three groups are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of the three different groups are not disclosed as being capable of use together and due to their different structural requirements, they have different modes of operation, however subtle.

Art Unit: 2834

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Direct inquiry concerning this action to Examiner Dougherty at (703) 308-1628.
